Continuation of 11. does NOT place the application in condition for allowance because: The 112 rejection regarding indefiniteness of claims 1, 9, and 17 has been withdrawn due to the amendment removing the "such as" language from the claims.

The applicant argues that Savin does not disclose a cooling module that can be disconnected from the inlet and outlet and removed without the use of a cutting means.

The examiner agrees.

However, Kummel et al discloses a heat exchanger for cooling gases (see Abstract) an inlet and an outlet that can be disconnected without the use of a cutting means (see figure 1; column 6, lines 32-36; and column 8, lines 1-11) by the use of flanges such that it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the teachings of Savin et al with the teachings of Kummel et al such that a cooling module can be disconnected from the inlet and outlet and removed without the use of a cutting means in order to easily remove the inlet and outlet for cleaning and replacement.

In addition, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have the inlet and outlet disconnected without the use of a cutting means, since it has been held that constructing a formerly intergral structure in various elements involves only routine skill in the art (see MPEP 2144.04 (V-C)).
